SPOA7, SPOA9, SPO9
Two Post Surface Mounted Lift
(200 Series Lifts)

SPOA7 Capacity 7,000lbs.  SPOA9 Capacity 9,000lbs.
1750 lbs. per arm  2250 lbs. per arm

SPO9 Capacity 9,000lbs.
2250 lbs. per arm
Wheel Spotting Dish

2' 5" (737mm)

6' 0" (1829mm) minimum to nearest obstruction or bay. 7' 0" (2134mm) minimum to nearest wall.

9' 0" (2743mm) minimum to nearest obstruction

15' 0" (4572mm) minimum to nearest obstruction

18" (457mm)

7' 11-3/8" (2423mm) SPOA7*
7' 3-3/8" (2219mm) SPOA7NB (Narrow Bay)*
8' 5-3/8" (2575mm) SPOA9*

8' 11-5/8" (2734mm) SPOA9*

*NOTE: Dimension is from Inside of Baseplate to Inside of Baseplate.

Fig. 1a

Power Unit
(Passenger Side)

Wheel Spotting Dish

2' 2" (657mm)

3' 10" (1178mm)

6' 0" (1829mm) minimum to nearest obstruction or bay. 7' 0" (2134mm) minimum to nearest wall.

11' 0" (3353mm) minimum to nearest obstruction

13' 0" (3963mm) minimum to nearest obstruction

15" (381mm)

*NOTE: Dimension is from Inside of Baseplate to Inside of Baseplate.

Fig. 1b
1. **Lift Location**: Use architects plan when available to locate lift. Fig. 1a & Fig. 1b shows dimensions of a typical bay layout.

2. **Lift Height**: See Fig. 4 for overall lift height of each specific lift model. Add 1" min. to overall height to lowest obstruction.

**WARNING** DO NOT install this lift in a pit or depression due to fire or explosion risks.

3. **Column Extensions**: Before standing columns upright, install the column extensions using (12) 3/8"-16NC x 1/2" Flanged HHCS, Fig. 4.

4. **Latch Cable Guides**: Install the latch cable guides to column extensions with (4) 1/4"-20NC x 1" HHCS and 1/4"-20NC Flanged Locknuts, Fig. 1c, Fig. 1d, & Fig. 10b.

**NOTE**: Latch cable guide must be toward approach side of the column extension. Coat the cable contact surface with a light grease such as “TUFOIL”.

---

**SPOA7/SPOA9**

![Diagram of SPOA7/SPOA9](image)

**Column Extension**

1/4"-20NC x 1" HHCS & 1/4" Flanged Locknut

**SPO9**

![Diagram of SPO9](image)

**Column Extension**

1/4"-20NC x 1" HHCS & 1/4" Flanged Locknut

---

**Installation torque of 150 ft-lbs. is required for all anchor bolts.**

**NOTE**: Use rectangular shims at inside edge of baseplate. Use constructions adhesive or silicon cement to hold shim in place. **INSURE** shims are held tightly between base plate and floor after torquing anchors.

**IMPORTANT**: All star washers are to be mounted on the right side column to ensure grounding of overhead limit switch. Star washers are not needed when mounting to left side column. Notice the column extension mounting, Fig. 4 and overhead limit switch mounting as well in Fig. 6.
5. **Lift Setting:** Position columns in bay using dimensions shown in Fig. 1a & Fig. 1b. Place column with power unit mounting bracket on vehicle passenger side of lift. Both column base plate backs must be square on center line of lift. Notches are cut into each base plate to indicate center line of lift. Use appropriate equipment to raise carriage to first latch position. Be sure locking latch is securely engaged.

If anchors do not tighten to 150 ft-lbs. installation torque, replace concrete under each column base with a 4′ x 4′ x 6′ thick 3000 PSI minimum concrete pad keyed under and flush with the top of existing floor. Let concrete cure before installing lifts and anchors.

7a. **Overhead Assembly:** Fig. 6: Adjust overhead to appropriate dimension. Install (4) 3/8”-16NC x 3/4” HHCS & 3/8”-16NC Flanged Locknuts, do not tighten. Mount switch assembly towards power unit column as shown, using (2) 1/4”-20NC x 3/4” lg. HHCS, 1/4”-20NC Nuts and 1/4” Star Washers. For Narrow Bay installation, see step 7b, all others go to step 7c.

7b. **For Narrow Bay installation only:** Cut off 11” from the length of the bar and cushion on the end opposite the 1/4” mounting hole. Continue to step 7c.

7c. **Continued Overhead Assembly:** Insert 1/4”-20NC x 2” HHCS through pivot hole in end of switch bar. Insert opposite end of bar through slot in switch mounting bracket. Then secure HHCS and Switch Bar to overhead as shown, using 3/4” spacer and 1/4”-20NC Locknut. Tighten Hex bolt leaving 1/16” gap between the spacer and the overhead assembly.

8. **Overhead Installation:** Install overhead assembly to column extensions with (2) star washers and (8) 3/8” x 1” HHCS and 3/8” Flanged Locknuts, Fig. 4. Tighten bolts at center of overhead assembly.

9. **Power Unit:** First install (1) star washer onto one of the (4) 5/16”-18NC x 1-1/2” HHCS. *This is very important for grounding.* Put the (4) 5/16”-18NC x 1-1/2” HHCS thru holes in power unit bracket using Push-Nuts to hold in place, Fig. 7a & Fig. 7b. Mount unit with motor up to column bracket and install (4) 5/16” star washers and 5/16” Nuts. Install and hand tighten Branch Tee to pump until O-ring is seated. Then tighten locknut to 35-40 ft-lbs, and connect supply hoses to Tee, Fig. 8a or Fig. 8b.

**NOTE:** Over tightening locknut may tear O-ring.

---

**Concrete and Anchoring:** Concrete shall have a compression strength of at least 3,000 PSI and a minimum thickness of 4-1/4” in order to achieve a minimum anchor embedment of 3-1/4”. When using the standard supplied 3/4” x 5-1/2” lg. anchors, if the top of the anchor exceeds 2-1/4” above the floor grade, you DO NOT have enough embedment.

Drill (10) 3/4” dia. holes in concrete floor using holes in column base plate as a guide. See Fig. 2 and Fig. 5 for hole depth, hole spacing, and edge distance requirements.

**CAUTION** DO NOT install on asphalt or other similar unstable surfaces. Columns are supported only by anchors in floor.

6. **IMPORTANT:** Using the horse shoe shims provided, shim each column base until each column is plumb. If one column has to be elevated to match the plane of the other column, full size base shim plates should be used (Reference FA5112 Shim Kit). Recheck columns for plumb. Tighten anchor bolts to an installation torque of 150 ft-lbs. Shim thickness MUST NOT exceed 1/2” when using the 5-1/2” long anchors provided with the lift. Adjust the column extensions plumb.
On one bolt, place (2) 5/16" Star Washers

Push nuts hold bolts to brackets.

Use (4) 5/16"-18NC x 1-1/2" HHCS, and 5/16"-18NC Nuts

On one bolt, place 5/16" Star Washers.

Push-nuts hold bolts to bracket.

FOR 3 PHASE POWER UNITS ONLY:
Attach Control Plate to Motor using (4) 5mm-.80 x 8mm lg. Flat Head Machine Screws

Attach control box to plate using (4) #8-32NC x 1/2" Self-Tapping Slotted PHMS

10. Hoses: Clean adapters and hose. Inspect all threads for damage and hose ends to be sure they are crimped, Fig. 8a or Fig. 8b. Install hose and hose clamps, Fig. 9b.
Flared Fittings Tightening Procedure
1. Screw the fittings together finger tight. Then, using the proper size wrench, rotate the fitting 2-1/2 hex flats. **IMPORTANT** Flare seat MUST NOT rotate when tightening. Only the nut should turn.
2. Back the fitting off one full turn.
3. Again tighten the fittings finger tight; then using a wrench, rotate the fitting 2-1/2 hex flats. This will complete the tightening procedure and develop a pressure tight seal.

**CAUTION** Overtightening will damage fitting resulting in fluid leakage.

Adapter & Hose Installation (see Fig. 9b)
1. Install Pc. (2) with hose clamps, on power unit column side connecting it to the cylinder (1) first.
2. Install Pc. (3) with hose clamps starting at left column cylinder (5) and working toward the right column. All excess hose should be at bends & inside overhead assembly.
3. Install Pc. (4) into power unit.
4. Connect Pc. (2) & Pc. (3) to Tee (4).

**NOTE:** Route Power Unit hose inside columns using slots provided at column base, Fig. 9c. Route Overhead Hose in column channel on outside of column, Fig. 9c. Overhead hose goes over top end of overhead assembly, Fig. 9b.

11. Equalizing Cables
A) Refer to Fig. 9a for the general cable arrangement. First, run a cable end up through the small hole in the lower tie-off plate. Fig. 10a.
B) Push the cable up until the stud is out of the carriage top opening.
C) Run a nylon insert locknut onto the cable stud so 1/2" (13mm) of the stud extends out of the locknut.
D) Pull the cable back down, Fig. 10a.
E) Run cable around the lower sheave, then up and around overhead sheave and across and down to the opposite carriage, Fig. 9a. Install sheave cover, Fig. 9c.
F) Fasten the cable end to the carriage upper tie-off bracket. Tighten the locknut enough to apply light tension to the cable.
G) Repeat procedure for the second cable. Complete lift assembly. Adjust the tension of both cables during the final adjustments in Paragraph 21.
12. Locking Latch Cable

A) Slip loop end of cable over end of shoulder screw on right side latch control plate, Fig. 11.

B) Feed the other end of the cable through the latch cable sheave slot making sure that the cable is running under the bottom side of the latch cable sheave and inside the right column, Fig. 11.

C) Route cable up inside column and through the latch cable guide, Fig. 12 & Fig. 10b.

D) Continue routing cable to the left column latch cable guide, Fig. 12 & Fig. 10b, routing the cable through the top of the left column latch cable guide, Fig. 10b.

E) Bring the cable down inside the left column and feed the end of the cable through the latch cable sheave slot so that the cable is now back outside the column, Fig. 13.

F) Route cable under the bottom side of the latch cable sheave, Fig. 13.

G) At this point you MUST install the latch handle, jam nut, and right column latch cover Fig. 10c & Fig. 11. Install latch handle ball, Fig. 11.

H) Insert cable in cable clamp along one side, loop around shoulder screw and back down, inserting cable along other side of cable clamp, Fig. 13. Place top back on clamp, barely tightening.

I) Next, pull the control plate down, Fig. 13, to eliminate any clearance between the control plate slot and the latch dog pin, Fig. 12.

J) Using Pliers, pull cable tight and secure the clamp close to the shoulder screw. Tighten clamp.
13. **Electrical:** Have a certified electrician run 208-230 volt single phase 60Hz power supply to motor, Fig. 14 & 15. Size wire for 25 amp circuit. See Motor Operating Data Table.

**CAUTION** Never operate the motor on line voltage less than 208V. Motor damage may occur.

**IMPORTANT:** Use separate circuit for each power unit. Protect each circuit with time delay fuse or circuit breaker. For single phase 208-230V, use 25 amp fuse, and three phase use 20 amp fuse. For three phase 460V, use 10 amp fuse. For three phase wiring see Fig. 16, and Fig. 8c. All wiring must comply with NEC and all local electrical codes.

**Note:** Standard single phase motor CAN NOT be run on 50Hz. line without a physical change in the motor.

14. **Overhead switch:** Check overhead switch assembly to assure that switch bar is depressing switch plunger sufficiently to actuate the switch. The overhead switch is wired normally open, see Fig. 14 & Fig. 15. Lift will not operate until weight of switch bar is depressing switch plunger. Verify that Power Unit stops working when switch bar is raised, and re-starts when the bar is released.

### Single Phase Fenner Power Unit

<table>
<thead>
<tr>

<tr>
<td>208 - 230 Volts</td>
</tr>
</tbody>
</table>

* N413
Voltage: 277V Max.
Current: 25A Max.

![Diagram of Single Phase Fenner Power Unit](image_url)
Three Phase Rotary Power Unit

**NOTES:**
1. Unit not suitable for use in unusual conditions. Contact Rotary for moisture and dust environment duty unit.
2. Control Box must be field mounted to power unit.
3. Requirements:
   - Use: FA7162 for 60 Hz. 208V Supply
   - FA7163 for 60 Hz. 220-240V Supply
   - FA7164 for 60 Hz. 440-480V or 50 Hz. 400V Supply
   - FA7165 for 50 Hz. 480V
4. *Verify Coil Rating Matches Supply Voltage*
5. Motor rotation is counter clockwise from top of motor.

**LOW VOLTAGE CONNECTION**

**HIGH VOLTAGE CONNECTION**

Two different wiring colors were used. Determine appropriate LEGEND.
**NOTE:** Once arm is installed in yoke, pull up actuator pin and swing arm fully around, being sure that the Restraint Gear and Gear Block always stay aligned. If they do not stay aligned, remove restraint gear and install in the opposite position.

![Diagram](image)

**NOTE:** Pull up on ring to raise Gear Block.

**NOTE:** Arm slides into yoke clevis and under Gear Block.

**NOTE:** Release and lower pin to activate restraint.

**NOTE:** To check operation of arm restraints, raise carriage 1” min. from full down position. Pull up on pin-ring and adjust arms to desired position. To engage restraint, let pin-ring down allowing gear teeth to mesh together. It may be necessary to rotate arm slightly to engage gear teeth.

- (8) 3/8-16NC x 1-1/2" lg. HHCS
- (8) 3/8" Spring Lockwashers
- "TOP" will be marked on top side of restraint gear
- Rounded Edge Up
- Gears will mesh together, closing clearance gap.
- 3/16 x 2" Cotter Pin

**Fig. 17**

**Fig. 18**

**NOTE:** Pin & Ring, Spring, & Gear Block are all preassembled.
15. Wheel Spotting Dish: Position wheel spotting dish as illustrated in Fig. 1a or 1b. Drill (2) 3/8” holes 2-1/2” deep in concrete floor using holes in wheel spotting dish as guide. Drive both anchors, provided, into concrete to secure dish.

16. Arm Restraints & Superstructure: Before installing arms, install arm Restraint Gears as follows: Install Restraint Gear into arm clevis, as shown in Fig. 17, so that the rounded edge (top side) of the gear teeth is facing upward. Then, install the (2) 3/8”-16NC x 1-1/2” HHCS (8 total for all 4 arms) and 3/8” Spring Lockwashers into the gear and arm as illustrated Fig. 17, but do not tighten.

After installing Restraint Gears, raise carriages to a convenient height. Grease swivel arm pins and holes with Lithium grease. Raise Gear Block by pulling upward on pin-ring to allow enough clearance for the Restraint Gear and arm to slide into the yoke clevis and under the teeth of the Gear Block, Fig. 18. Install 1-1/2” diameter arm pin(s) and 3/16” x 2” cotter pin(s), Fig. 19. After installing arm pin, torque the two Restraint Gear bolts to 30-34 ft.-lbs. Let the Gear Block down allowing the teeth of the Restraint Gear and Gear Block to mesh together, Fig. 18.

17. Oil Filling & Bleeding: Use Dextron III ATF, or Hydraulic Fluid that meets ISO 32 specifications.

Remove fill-breather cap (and fill vent screw for Fenner Power Unit), Fig. 7a or Fig. 8a. Pour in (8) quarts of fluid. Start unit, raise lift about 2 ft. Open cylinder bleeders approx. 2 turns, Fig. 9b.

Close bleeders when fluid streams. Fully lower lift. For Fenner Power unit, add more fluid until it comes out fill vent hole. All others fill until it reaches the MIN mark on the tank. System capacity is (13) quarts. Replace fill-breather (and fill vent screw for Fenner Power Unit).

⚠️ CAUTION ⚠️ If fill-breather cap is lost or broken, order replacement. Reservoir must be vented.

18. Door Bumper Installation:
A) Press long bumper on column edge, Fig. 20.
B) Press short bumper on top edge of carriage tube, Fig. 20.

19. Latch Cable Adjustment:
A) Check to make sure the latch will properly engage and disengage. Slowly release the latch handle. A 1/8” gap between the top of the latch dog and the column is allowable.
B) When raising, listen to latches to be sure that both latch dogs fall into latch slots. If they do not, loosen clamp and adjust tension as necessary.
C) Install left latch cover using 5/16-18NC x 3/8” lg PHMS.
20. **Pressure Test:** Run lift to full rise and keep motor running for 5 seconds. Stop and check all hose connections. Tighten or reseal if required. Repeat air bleeding of cylinders.

21. **Equalizer Cable Adjustment:** Raise lift to check equalizer cable tension. Below carriage, grasp adjacent cables between thumb and forefinger, with about 15 lbs. effort you should just pull the cables together. Adjust at upper tie-offs Fig. 10a.

22. **Latch Release Decal:** If latch release decal is not already installed, then install on cover above latch release handle, Fig. 21.

23. **Pinch Point Decal Location:** Install enclosed pinch point decals. Place (1) decal on each column, Fig. 22. Decals should be a minimum of 8” from the bottom of decal to the ground.

24. **Rotary Decal Location:** Clean area where decals are to be placed. Remove backing from decals. Position and apply on approach sides of each column extension as indicated, Fig. 23, and press flat.
Installer: Please return this booklet to literature package, and give to lift owner/operator.

Thank You

Trained Operators and Regular Maintenance Ensures Satisfactory Performance of Your Rotary Lift.

Contact Your Nearest Authorized Rotary Parts Distributor for Genuine Rotary Replacement Parts. See Literature Package for Parts Breakdown.

REV.  CHANGE MADE
L    Added Rotary power unit instructions.
M    Changed 3Ø wiring to match control panel.
N    Change 1Ø motor grounding location. Added alternate 3Ø wire color legend.
     Changed wording section 7b.
P    Changed 3Ø fuse size.
